Care Guide

Care Guide

GatePro

Caring for your gate

All gates should be cleaned on a regular (3 monthly) basis with a soft brush and a mild detergent solution. Do not use harsh abrasive products. Do not use a high pressure water blaster. Refer to the dulux powdercoat care guide.

Ensure that all organic matters are kept clear from the gate, posts, track and motors.

Hinging and latching hardware should be inspected and lubricated as required every month.

Posts, sliding gate track, end stops, and any associated fixings and hardware should be inspected every month.

It is vital that bug deterrent is applied every month to all electrical areas (motors, keypads, safety beams etc.).

Your gate needs to be serviced every 12 months by GatePro Limited and any servicing guidelines from manufacturers must also be adhered to.

We recommend changing the gate batteries every 2-3 years depending on usage. Only use genuine centurion batteries.

Any damaged to the equipment or unusual equipment operations must be reported immediately to GatePro Limited and any damage or faults must be repaired using only genuine products supplied or recommended by GatePro Limited.

Ensure all persons who operate the gate are trained and know the risks associated.
